

Title: Develop Internal Ticketing System

Description: Create a tool for managing internal support tickets, tracking issue resolution times, and generating performance metrics.

Todo Checklist:

- Design ticket management schema
- Build ticket submission and tracking UI
- Implement ticket priority and status flow
- Integrate email-based ticket updates
- Generate resolution time reports
- Enable ticket tagging and filtering
- Set up role-based dashboard views

Title: Develop Customer Feedback System

Description: Create a platform for collecting and analyzing customer feedback from multiple channels. Integrate sentiment analysis and reporting features.

Todo Checklist:

- Design feedback data schema
- Develop feedback submission form
- Implement sentiment analysis module
- Create feedback report dashboard
- Enable email notifications for critical feedback
- Integrate with CRM system
- Add feedback export to CSV option

Title: Set Up Asset Management System

Description: Build a centralized platform for managing company assets including acquisition, assignment, and depreciation tracking.

Todo Checklist:

- Design asset inventory schema
- Develop asset registration form
- Implement asset assignment tracking

- Add depreciation calculation module
- Generate asset usage reports
- Enable asset transfer functionality
- Secure access with user roles

Title: Create Learning Management System (LMS)

Description: Build a system for managing online courses, student progress tracking, and interactive learning tools.

Todo Checklist:

- Design course and module database
- Create instructor and student dashboards
- Integrate quiz and assessment engine
- Track course progress analytics
- Enable certificate generation
- Add video and document resource support
- Implement user role-based access

Title: Implement Online Appointment Scheduler

Description: Develop a system to schedule, modify, and cancel appointments. Include calendar integration and automatic reminders.

Todo Checklist:

- Create appointment booking UI
- Design scheduling backend logic
- Add calendar sync support
- Implement notification system
- Enable admin appointment controls
- Build reporting feature for bookings
- Set up user authentication
